Subject: RE: Rockpool PW stone cladding - RFI

Great thanks James,

Are we able to use SikaTile – 410 Secure set Tile and stone adhesive? This is currently what we have onsite ready to install.

What is the max height we are able to go with this?

Regards,

Hi James,

Have you been able to look at this below email from Callum?

We would love an outcome, as we only have 6 weeks left onsite and there is a lot of work in these walls.

Hi James,

See attached Elevations markups with notes for each location. In terms of height of the cladding we would prefer to keep it to maximum 3.0m or 2400mm depending on the location.

Thickness of the stone ranges 15mm-40mm. Majority of the stone is closer to 30mm. See attached photos.

Any questions please call.

Good afternoon Daniel,

Tried to call to discuss the stone cladding at Rockpool Pelican waters.

We require an engineers signoff for the actual installation of the stone. Nerisa confirmed the blockwork wall can take the load, however the next step is authorisation of the install (adhesive and mechanical fixings).

Can you please call back to discuss if this is something you could provide? Or would this be better suited to a temp works engineer?

Example of cladding location:

Hi Dan,

For Rockpool Pelican waters we have sections of blockwork wall which is to have stone cladding on it – see below and attached for extent. Front entry and back of kitchen wall are the main extents.

One item we would like to confirm is that the wall can sufficiently take this 80kg/m2 load?

The actual install and adhesive is another item we are closing out, but we would like to confirm with Acor that the blockwork wall can take this added load.

Please advise.

Subject: Rockpool stone cladding

Hi Callum ,

As per our conversation we have stone cladding to be installed on the outside of the kitchen walls .
Elevation and snapshot below show the extent . The specified stone to go on the walls is up to 80kg
per m2 , which is much higher than expected . The stone ranges from 20-45mm thick in various sizes
(crazy pave) my measure comes to about 120m2 for this area. Ends up on both Blockwork and AFS
. Was this raised with Acore at the design stage , do we need to run this by them before installation
? We also have a section above the main entry and on the entrance road although not to the same
extent.

What are your thoughts .
