No worries Stu, I'm back there on Monday to start level 5 fit off I'll come and see you then.

Cheers

Glenn Parrish

Glenn

The developer wants the tap installed, come and see me for that vary when you are on site next.

Glenn

Thanks for sorting out that D/P straight away, I have double checked the plans and you are right it isn't shown on them, I am waiting to hear back from the developer if he wants to proceed with the vary.

Regards

Stuart Betts

G'day Stu, firstly I have fixed the loose clips on the D/P so there is no problem there, however the hose tap does not appear on any of the stamped and approved plans that we have, I have had Ryan confirm this as well, can you check yours and confirm this too, and let me know. On the plus side I have had a look in the basement and we should be able to run a feed over and up through the floor quite easily if the developer wants a tap there. I will need to get you to sign a variation for this one but as it wasn't part of the original scope of works. Let me know how you go.

Cheers

No worries Stu I'll have a look at that today and get back to you.

Cheers

Glenn

I completed a walk around with the developer this morning and we noticed a missing hose tap on the balcony of unit 2, and also clips that are loose on the 150mm D/P on the southern end of the building. He has insisted that this needs to be rectified, can you have a look when you get a chance and advise how you are going to achieve this.

Regards

Stuart Betts
